DAVID CARR
LOCKSMITHS & ALARMS

Nydac-Presco Intercom Keypad

To enter a new code:

1. For vandal external keypad, enter **master code** then press "#" (or E for internal keypad) - you are now in programming mode
2. Enter program user location - press "*" then user location "XXX" then "1" then "#"(or E for internal keypad). User location codes start from 000 to 300. Normally your first user location code is 000 so XXX would be 000. In the detail notes on the next page User Location Code is Memory Code.
3. Enter new four digit code and # (or E for internal keypad). You should hear three little beeps. The code is now changed and you are now out of programming mode.

If you get a long drawn out beep then there is a code for that user number and you need to need to delete the code before you enter a new code.

To delete a user code:

1. Enter **master code** then press "#" (or E for internal keypad)
2. press # then user location code "XXX" then #. This deletes the user code and out of programming mode. You can now enter the new code as detailed above.

Open Gate

To open gate, enter your entry code and push open gate. The electric strike will open for 5 secs and then lock if gate not opened.

Specialising in home security including a complete locksmith Service (including master & restricted key Systems), alarm systems, back to base monitoring, keyless access, CCTV systems, safes (standard and fire resistant).

Detailed notes as follows:

21

Program or change the Management Code.
